Patient Navigator Care operations platform

The calling and care-navigation platform every patient contact at the foundation runs through: about 670 active patients, risk-flagged call queues and one record per family.

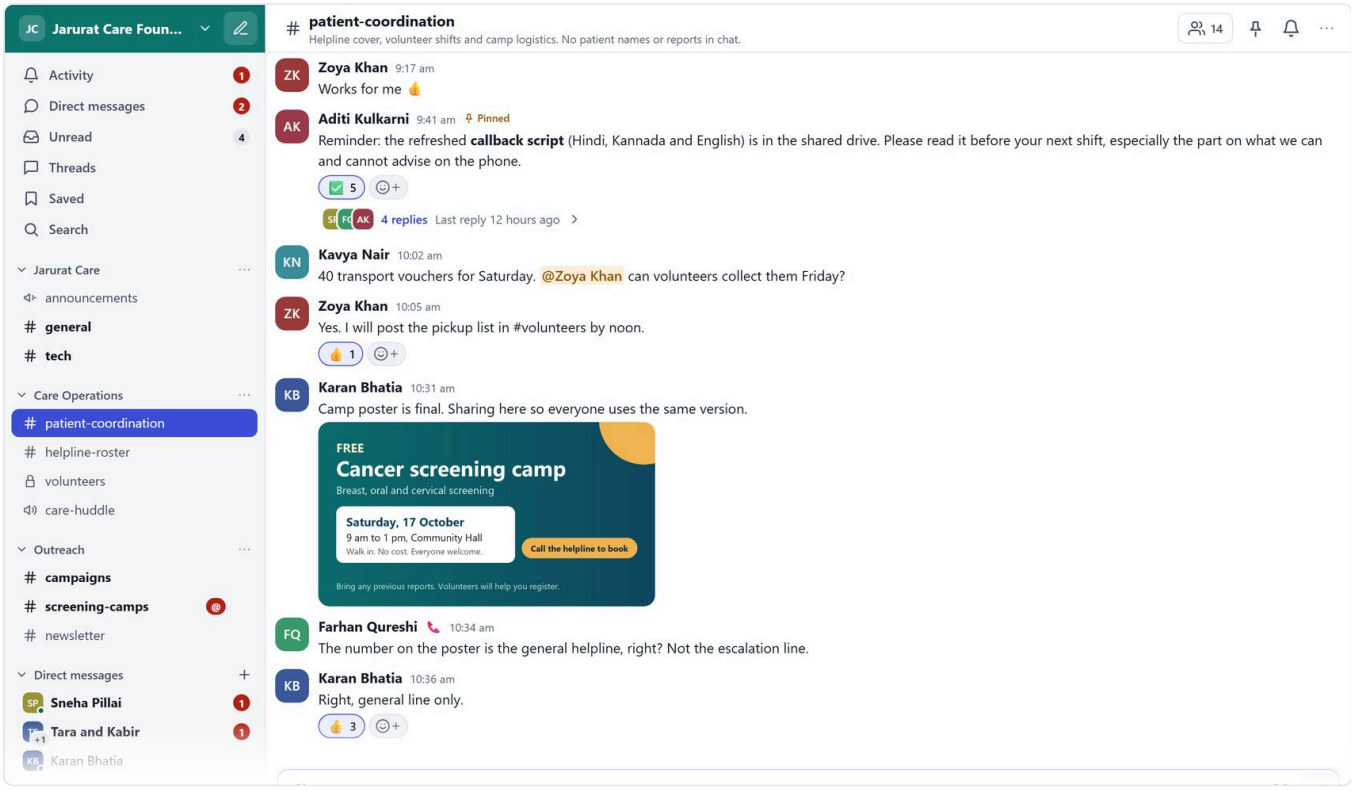

AI summaries of medical reports on a single timeline, consent-gated call recording with AI transcripts, and role-based access over 180+ database migrations under row-level security.

HopeBot WhatsApp care bot and staff console

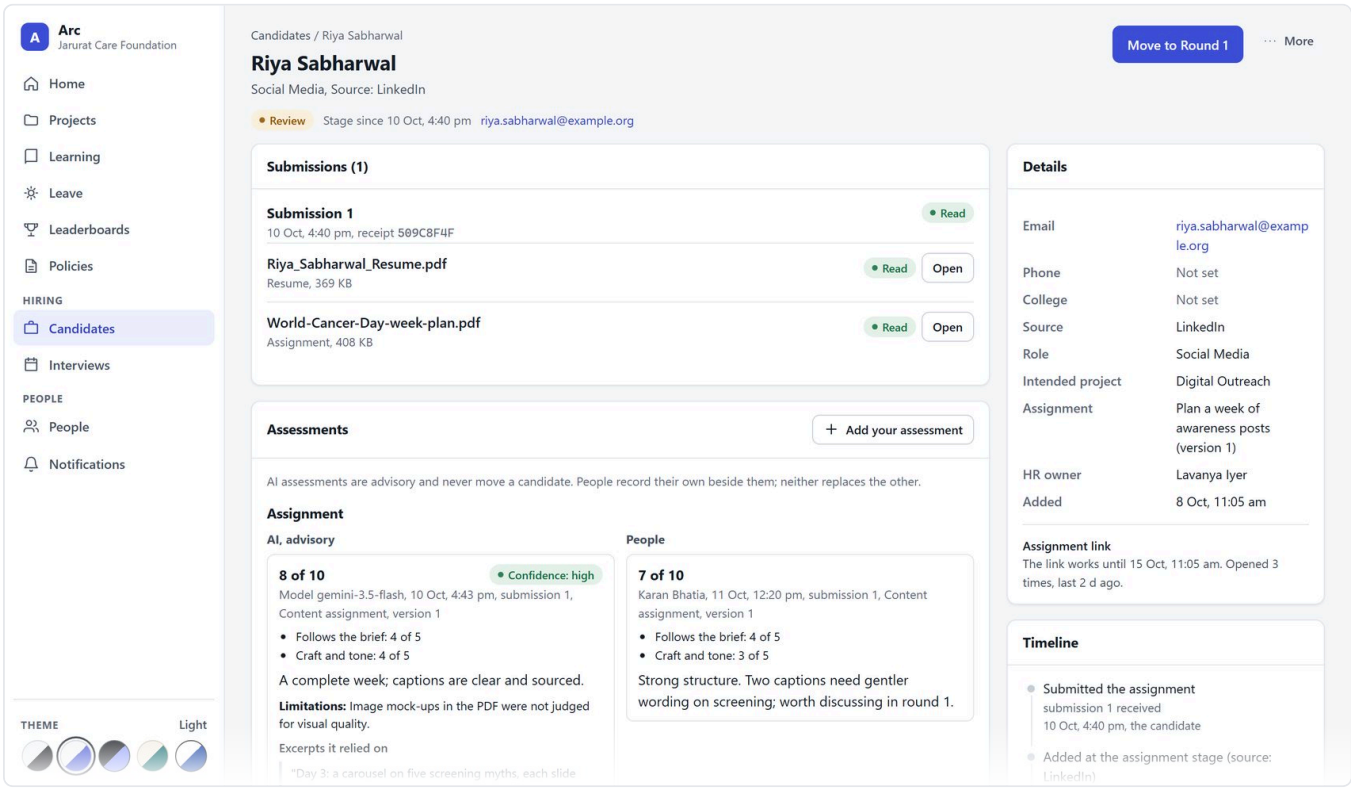

A WhatsApp care bot on the Cloud API, live for all families: sign-up with consent, reports filed straight into the patient record and AI report reading. A treatment roadmap PDF, on a teammate's engine, still needs a GI oncologist's sign-off. Built and run on a teammate's conversation design. Staff work conversations, handoffs and messaging rules from this console. 1,280+ automated tests.

Dek Team chat

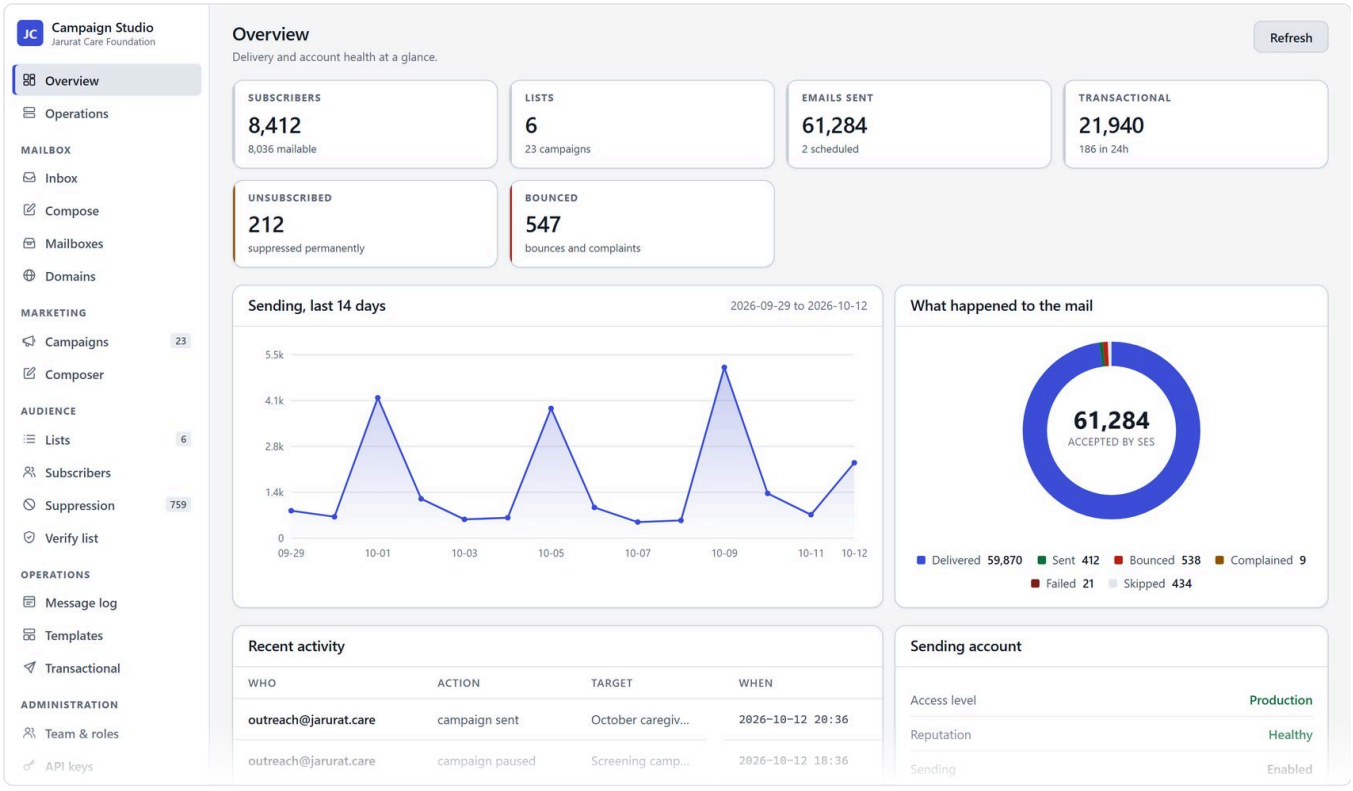

A Slack-style workspace for the whole team: channels, threads, files, push notifications and sign-in codes by email. Moved the organization over live with a rollback path. Load-tested at 300 users for an hour with zero lost messages, and a 500-user reconnect burst.

Arc Hiring and people operations

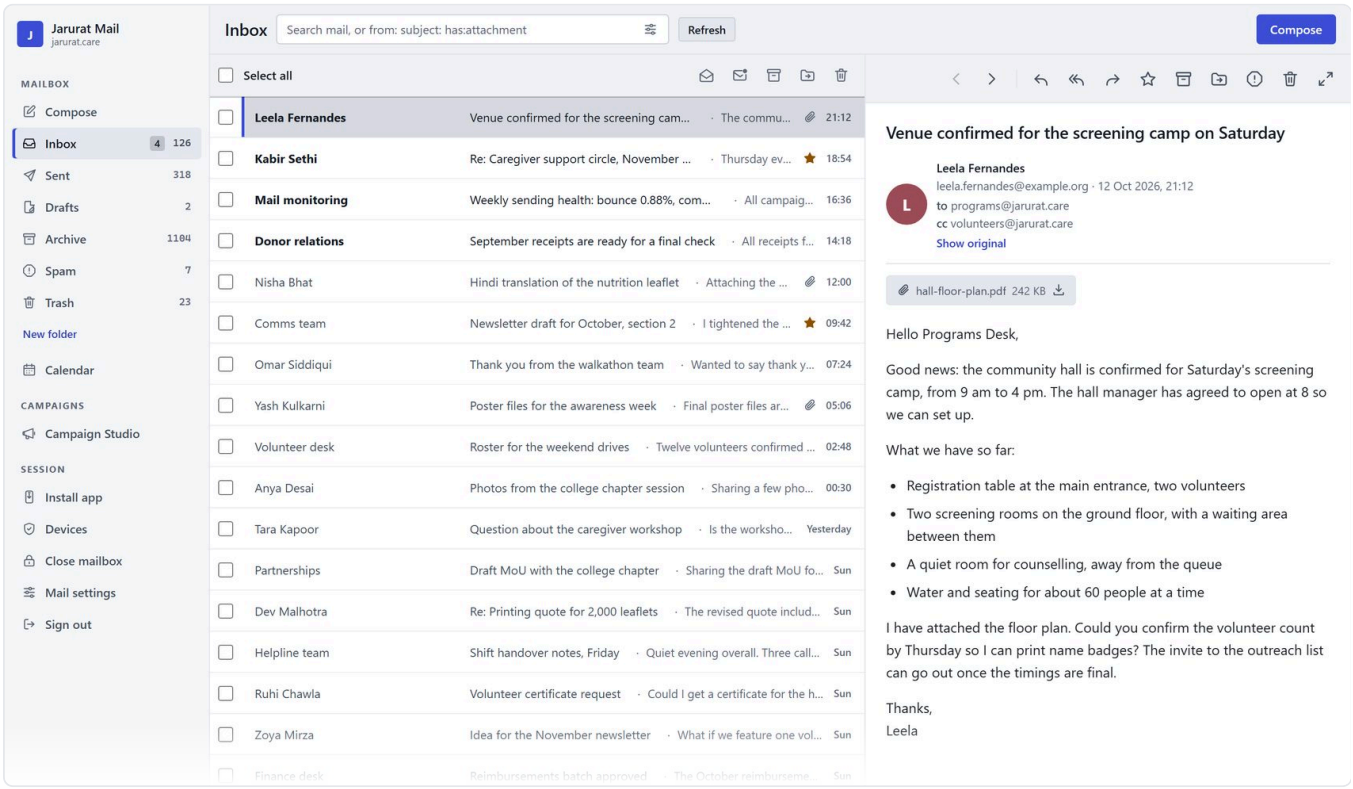

Hiring to exit in one place: HR publishes roles and assignments, candidates apply on a public page, AI scores each submission and a person reviews it separately.
Then onboarding, 10-day performance cycles and leave. Under a 50-user load test, p95 page load was cut from 4.5 s to 552 ms.

Campaign Studio Self-hosted email platform

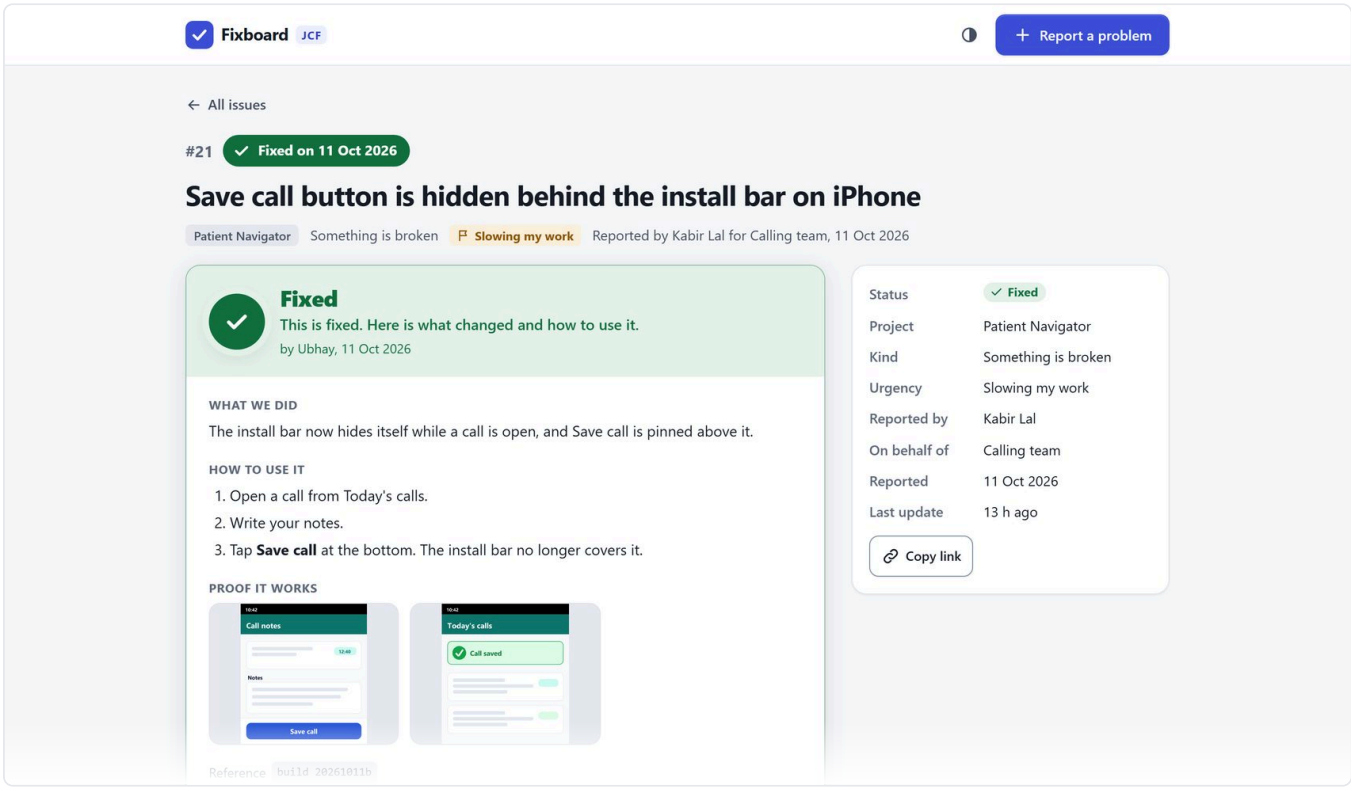

Campaign and transactional email on AWS SES, rebuilt from a teammate's first version to move outreach in-house from third-party senders.
Ran the Horizon VII webinar campaign to 65,000+ clinicians with lists graded by mailbox verification and an automatic send circuit breaker.

Jarurat Mail Team webmail and calendar

Webmail and calendar for the team on the same platform: shared mailboxes, templates in every composer, AI drafting and attachments shrunk in the browser.
Five themes shared with the other products, checked for contrast in every one.

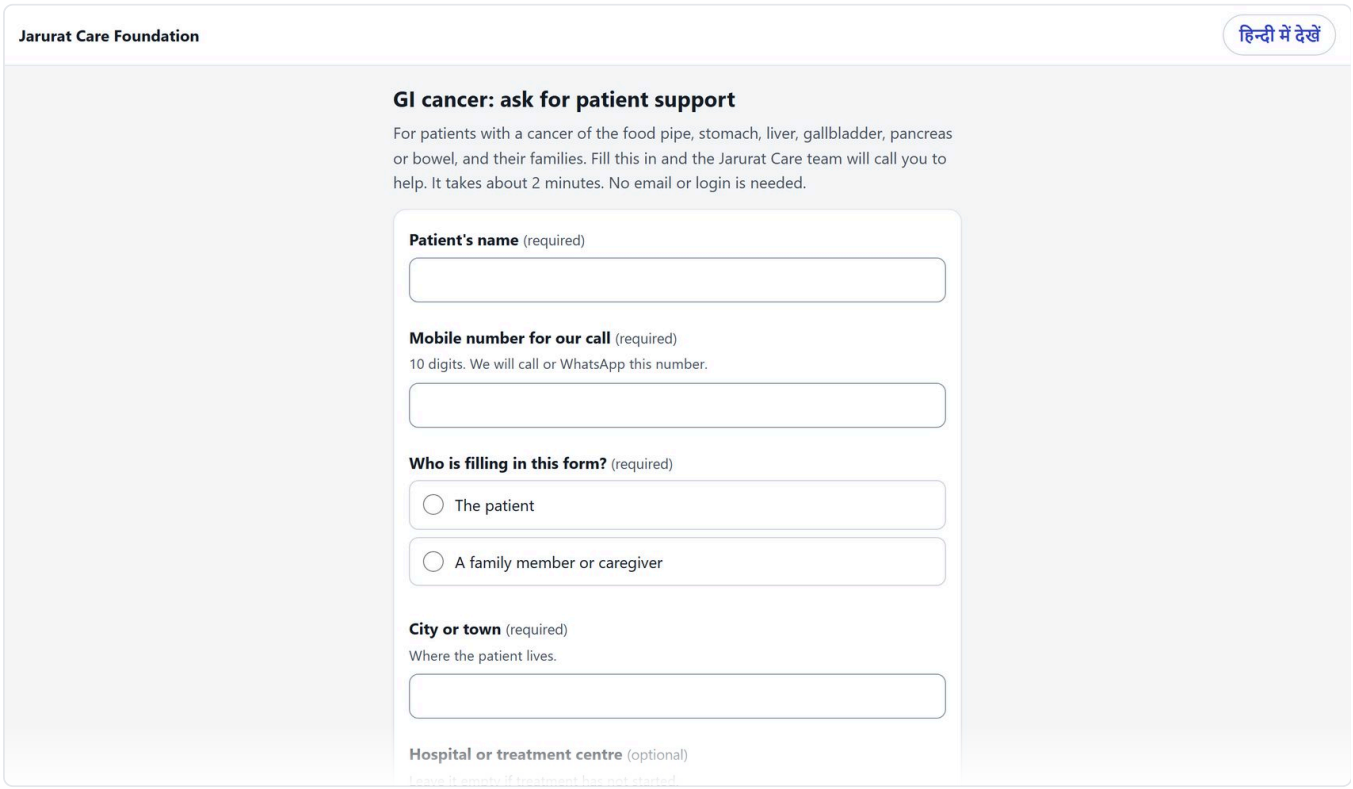

Fixboard Team issue board

Anyone on the team reports a problem in any product, with screenshots or by voice; photos are stripped of location data on upload.
Every issue ends Fixed with a proof screenshot and a step by step how-to, Done differently, or Declined with a reason.

GI Cancer Referral Form Public patient referrals

Live, English Hindi

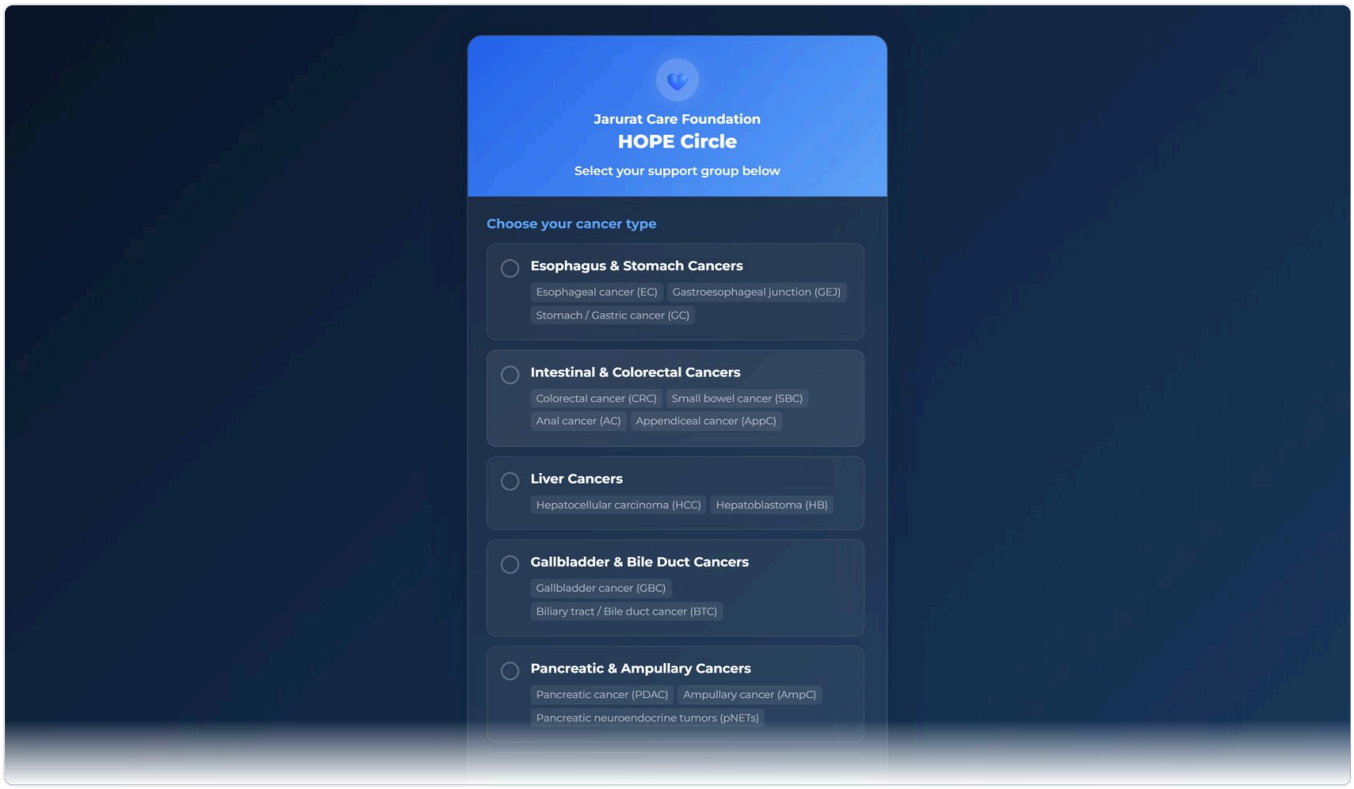

A bilingual (Hindi and English) form doctors share with GI cancer patients and their families.

Each referral lands as a new lead in Patient Navigator through a gated database function, with the exact consent wording the family agreed to stored alongside it.

HOPE Circle Support group router

Live

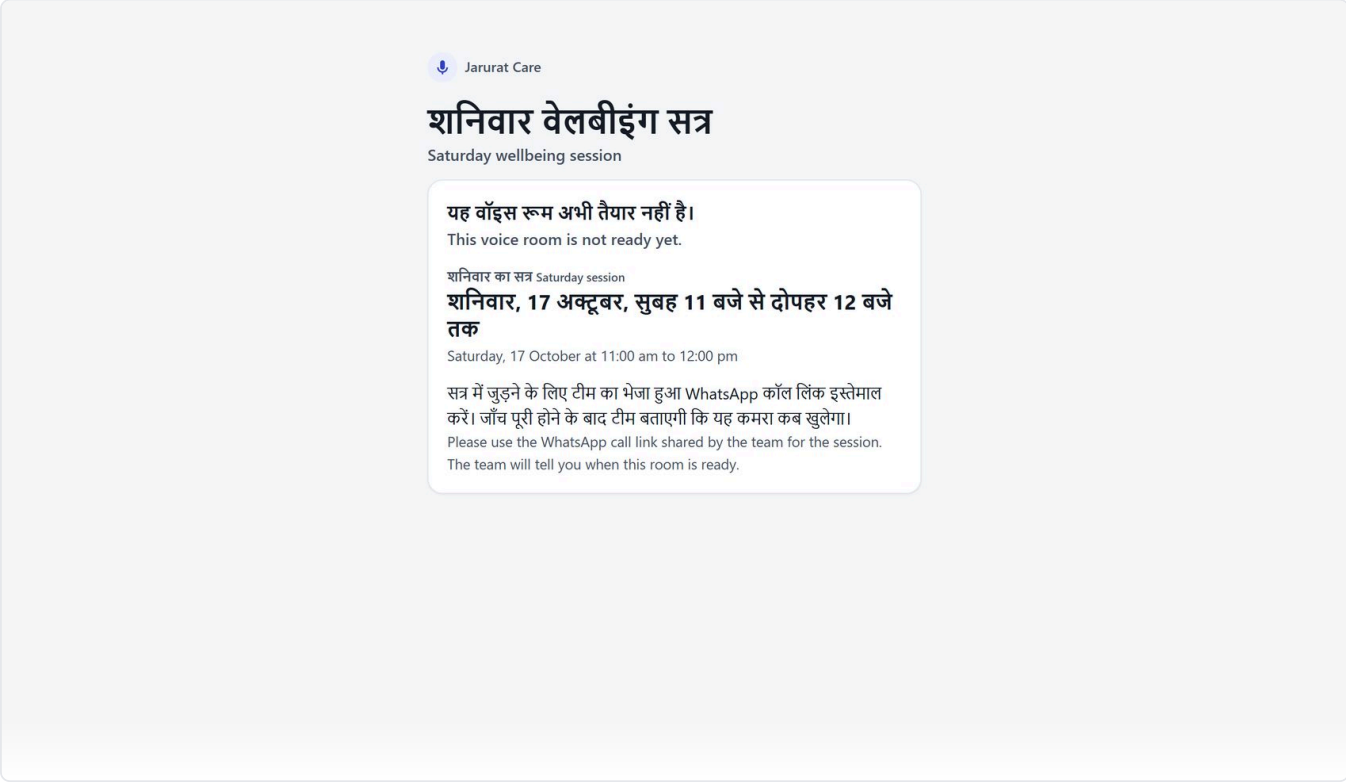

A trilingual public page that routes patients and caregivers into the right WhatsApp support group.

Six GI cancer groups, in English, Hindi and Marathi.

Saturday Wellbeing Room

Caregiver circles, audio in testing

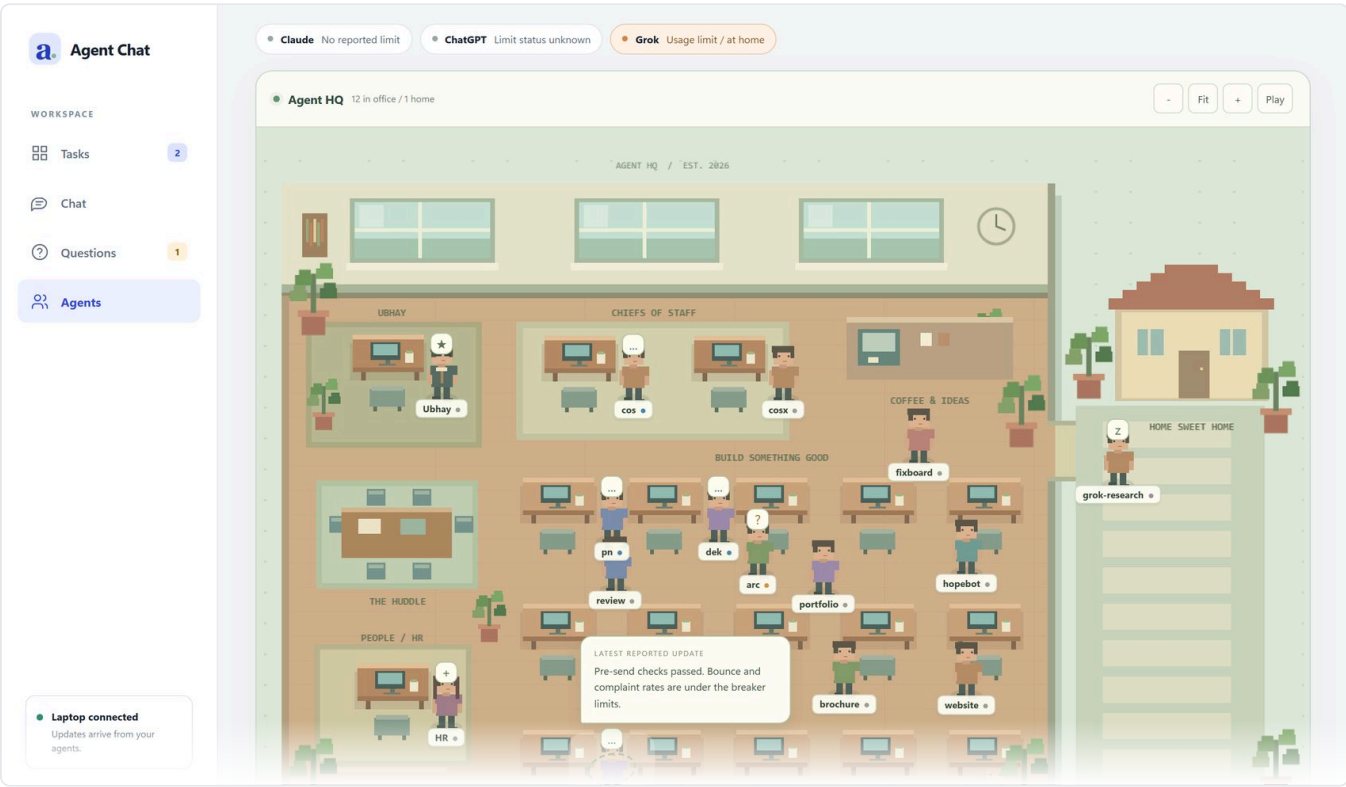

Public page

The page for the foundation's weekly caregiver wellbeing circle. Until live audio is switched on, it shows the next session and a Hindi and English WhatsApp fallback.
Session reminders are held until consent checks are complete.

Agent Chat

My AI operations setup, not a JCF system

The coordination layer behind all of the above: a fleet of AI coding agents (Claude Code, Codex) that claim shared resources before touching them and wake when tagged.
Progress and questions reach me on a phone portal. Rendered here on invented state.
